iCircuit drawing by Øyvind Teig,
see https://www.teigfam.net/oyvind/home/technology/195-my-icecore-notes/#icircuit_drawings

iCircuit will number subcircuits from 1 to N and show as if a DIL chip.
Therefore pin numbers are defined as an element of a pin name.
To make the pin number appear closest to the pin:
the left, uneven numbers start with pin number and
the right, even numbers end with that pin number.

- AN0-AN15 are named A0-A16 so that text wil not overlap when iCircuit lays it out
